Galvanic Encasements can make effective long term use of existing columns, abutments, piers & beams by extending their life with cathodic protection. There are many benefits to this approach including economic, environmental and disruption.

- Repair, Protect and Strengthen
- Severely Corroded Structures
- Accelerated Bridge Construction

Galvanic EnCAseMents

Top: Railway Overpass - Midwest USA
- Galvanic Anodes with Stay-in-Place FRP Jacket

Middle: Island Park Drive Overpass - Ottawa
- Rapid Deck Structure replacement overnight
- Substructure rehabilitation with Galvanic Anodes, designed to last as long as the new deck.

Below: Historic Bus Terminal - Twin Cities, MN
- Pouring concrete for column jackets with Galvanic Anodes (5 per column)
