Galvashield® Fusion™ T2 Receives Most Innovative Products Award

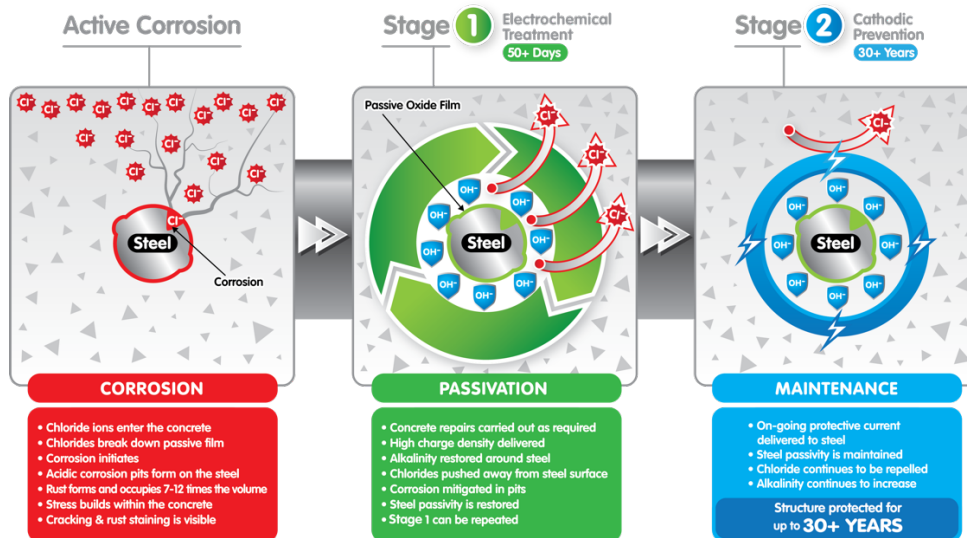

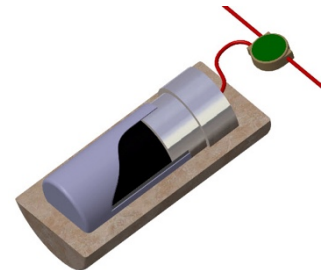

Low-resolution and high-resolution photographs available

TAMPA, FL - April 3, 2018 - Vector Corrosion Technologies, the leading full-service supplier of concrete and masonry restoration technologies and services, is pleased to announce the Galvashield® Fusion™ T2 anode system for reinforced concrete was recently awarded 2018 Most Innovative Products (MIP) at the World of Concrete Awards.

Presented annually in conjunction with the World of Concrete in Las Vegas, the MIP Awards program showcases many products exhibited at the show. Winning products are chosen by World of Concrete Attendees, a panel of industry experts and online balloting based on the innovation they bring to the industry.

Galvashield Fusion T2 is an advanced two-stage concrete corrosion mitigation system that combines the power of impressed current cathodic protection with the maintenance-free performance of galvanic anodes in a single anode unit.

After an initial phase of self-generated electrical current passivates concrete reinforcement corrosion, the anode unit automatically switches to galvanic cathodic prevention that shields the structure from future corrosion damage. The Galvashield® Fusion™ T2 anode system protects concrete structures from corrosion for up to 30 years or more.

Galvashield Fusion T2 is the ideal solution for long term, low maintenance preservation of structures suffering from corrosion-induced concrete damage such bridges and parking structures, residential and commercial buildings, piers and wharfs, and industrial facilities.

For more information, contact Vector Corrosion Technologies or visit our website at <https://www.vector-corrosion.com/galvashield-fusion-t2>.

About Vector

At Vector Corrosion Technologies, saving structures is what we do. With the largest range of cathodic protection technologies and services to control concrete corrosion, Vector offers innovative solutions for most every budget and service life objective. For more information, contact Vector Corrosion Technologies at info@vector-corrosion.com or info@vector-corrosion.eu.
